

## FAQ's Creation Joystick

**Q: Does the Creation Joystick only work with the Creation furniture?**

**A:** At this moment the Joystick is designed to fit into the arm of the Creation Cinema and TV chairs. However, if you want to install the Joystick into a particular chair please send us the details of the chair: [info@creation.com.es](mailto:info@creation.com.es)

**Q: Can the Creation Joystick be integrated into other control systems, e.g. Crestron, Control 4?**

**A:** The Joystick is a networked device using Internet Protocol (IP) language to send commands to a control system. Most control systems do support this protocol, although additional programming would be required by the control system programmer.

**Q: What cables are required for the Joystick?**

**A:** The Joystick is a Power-over-Ethernet (POE) device so only requires a single Cat5 or Cat6 cable to connect it to a POE switch.

**Q: Can the buttons on the Joystick be engraved with different words?**

**A:** This is not a problem and can be achieved as a special order item – the maximum number of characters on any button is 8.

**Q: What colours can be provided?**

**A:** The colour options are Black, Silver, Gold, Red and Blue. Special colour orders may also be possible. Please contact us for further information: [info@creation.com.es](mailto:info@creation.com.es)

**Q: How can I see what each button does in a dark cinema?**

**A:** The buttons on the latest generation Joystick are back-lit for visibility in darkened rooms.
